So, if you want to start a new playlist with a different MP3 file, you must change the MP3 file name from the one in the "Playlist_Audio" in the macro. Screenshot: C - Playlist Numerical Notes - Created by Matthew A. Walters Description: Playlist Numbering Notes uses text-to-speech technology to provide a vocal accompaniment. The program reads numbers from the first spreadsheet cell to the last, so you can accompany your numbers with whatever music you like. The program only works with Excel versions 2003 and later. The user interface is simple: Select the music you want to hear

from a drop-down list. Numbers are read aloud in the order they appear in the source spreadsheet. Requirements: Microsoft Excel 2007, or later. Warning: The TTS engine may cause system delays while it's operating. Screen shots: I've been testing a few free options from "Song list to MP3" that have appeared in the last year or so. This is a list of one of those programs. It's purpose is to help you bring music files into your work, and keep them organized. The most common use is for musicians who have thousands of music files, and can't remember the titles or the songs. This type of tool helps you keep track of the music you're listening to, and when you're listening, helps you remember the song title. You can type in a song or MP3 into a field.
